Fittlyf Internship Assignment

Make a basic **social media** application using React js and Django framework. Use tailwind css in frontend to make an elegant looking UI.

The social media application should be capable of:-
1. Login / Signup
2. Posting Image, Editing and Deleting as well
3. Liking posting
4. Every account is a public account and all posts of everyone are always visible in the feed
5. In the profile of every account only that particular user's post should be visible and user should be able to edit and delete them

Things to keep in mind while developing the application:
1. Use ModelViewset and Django REST framework only
2. Use tailwind css only in frontend
3. Using Ionic react capacitor framework to deploy apk will be a plus point for the candidate

The candidate shall provide the link of the github repos in the chat. Frontend and Backend should have separate repos with proper documentation of how to run the project. Providing a screen recording of the working of the application and explaining the frontend and backend will be a plus point.

ALL THE BEST
